                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                "Membrane anchored serine proteases: a rapidly expanding group of cell surface proteolytic enzymes with potential roles in cancer."; Cancer Metastasis Rev. 22:237-258(2003).
-!- FUNCTION: May play a specialized role in matrix remodeling processes in liver (By similarity).
-!- SUBCELLULAR LOCATION: Type II membrane protein.
-!- TISSUE SPECIFICITY: Expressed at highest levels in liver, kidney
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                and uterus.

-!- DEVELOPMENTAL STAGE: Expressed at higher levels from 12.5 dpc to 15.5 dpc with a peak at 13.5 dpc. Expression in the developing liver as well as a restricted set of embrinic epithelial cells of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE=22668120; PubMed=12784999;

Wolecular cloning of dog mast cell tryptase and a related protease:
structural evidence of a unique mode of serine protease activation.";
Biochemistry 28:4148-4155(1989).
-: FUNCTION: Tryptase is the major neutral protease present in mast
cells and is secreted upon the coupled activation-degranulation
response of this cell type.
-: CATMATTIC ACTIVITY: Preferential cleavage: Arg-|-, Lys-|-, but
with more restricted specificity than trypsin.
-: SUBUNIT: Homotetramer.
-: SUBUNIT: Homotetramer.
-: SUBUNIT: Homotetramer.
-: SUBUNIT: Homotetramer.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 2. Application US/09948094
Patent No. US20020090625A1
GENERAL INFORMATION:
APPLICANT: The Brigham and Women's Hospital, Inc.
APPLICANT: Wong, Kamuel
APPLICANT: Wong, Kwong-kwok
TITLE OF INVENTION: Methods of Detecting Cancer Based on Prostasin
FILE REPERENCE: 81994/828423
CURRENT APPLICATION NUMBER: US/09/948,094
CURRENT PILING DATE: 2001-09-07
NUMBER OF SEQ ID NOS: 4
SOFTWARE: PatentIn version 3.0
